PCI DSS L1 · SARB COMPLIANT

AUTHORISE · SCHEDULE · COLLECT · RECONCILE

RECURV CORE

Payment operations, built for South African enterprise scale.

Recurv is the payment collection layer trusted by golf clubs, schools, sport clubs, property managers and many other industries across the country. One platform that handles authorisation, scheduling, collections, retries and reconciliation at any volume, with the audit trail your accountant actually wants. No more monthly batch file uploads. No more manual reconciliation. Recurv automates the entire collection process, from authorisation to reconciliation, allowing you to focus on growing your business.

01

Cut the admin

Stop wrestling with spreadsheets, paperwork, and manual follow-ups. Recurv enables customers to authorise payments digitally and allows your team to create flexible collection schedules for any business model. Whether you bill once, monthly, indefinitely or based on changing amounts, we make revenue collection effortless.

02

Collect with confidence

Move beyond spreadsheets and batch files. Recurv automates recurring revenue collections from end to end, handling payment processing, status updates, retries and reconciliation in real time. Your team gets instant visibility into collection outcomes without lifting a finger.

03

From reconciliation to resolution

Recurv automatically matches and reconciles collection outcomes, allowing your back-office team to focus on resolving failed payments instead of processing successful ones. Real-time dashboards provide complete visibility into collection performance without the spreadsheets and manual effort.

04

Digital mandates in minutes

Let customers securely authorise recurring or once-off collections through a simple digital mandate. Send approval links via email, SMS, WhatsApp or QR code, or embed the experience directly into your website. Customers can complete the process from any device, eliminating paperwork, reducing delays and removing manual administration.

05

Know your revenue

See upcoming collections, expected revenue, success rates, failed payments and collection trends in real time. Recurv gives your team complete visibility into future cash flow, helping you forecast accurately and act before revenue problems become cash flow problems.

FULLY CONFIGURABLE

Your billing model. Your rules.

Every business has its own billing model, and no two customers are exactly the same. Recurv is built around that reality. Whether you're collecting a once-off payment, fixed-term instalments, ongoing subscriptions, ad hoc charges or variable monthly amounts, you can configure every collection exactly the way your business needs it. No custom development, spreadsheets or workarounds, just complete flexibility from a single platform.

01	Once-off collection	Collect a single payment and close the instruction. Ideal for deposits, registration fees or any charge that only needs to happen once.	DEPOSIT · REGISTRATION FEE
02	Fixed-term collections	Set a defined number of collections, say 10 monthly installments and Recurv stops automatically when the term ends.	10 MONTHLY INSTALLMENTS

03	Ongoing collections	Set it once. Collect automatically. With no end date required, collections continue on schedule until cancelled, eliminating the need to recreate payment plans or manage renewals manually.	MEMBERSHIPS · RENT
04	Ad hoc fees	Add a once-off charge to any active collection. For a callout fee, admin cost or event ticket without disrupting the schedule. It collects once, then drops off.	ADMIN FEE · EVENT FEE
05	Variable amounts	Collect a different amount each month. Set a variable rate and update it before each collection run. Useful for usage-based billing and levy adjustments.	LEVY ADJUSTMENTS · UTILITIES

TWO PAYMENT RAILS

Card or EFT debit order, your customer's choice.

Recurv runs on both card payment rails and EFT debit orders, so your customers can authorise collections the way that works for them. More options means fewer drop-offs at authorisation and a higher first-attempt success rate across your book.

Card payments

Fast authorisation, broad customer reach. Customers authorise via card, revenue collected against card with intelligent retry logic.

EFT Debit orders

The trusted South African standard. SARB-compliant debit order rails and intelligent retry logic.

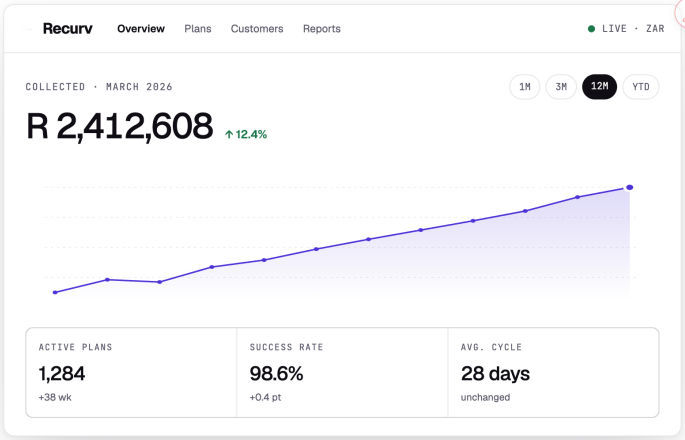

BILLING CYCLE CONTROL

Focus on what needs attention. We handle the rest.

Recurv gives your team a complete view of every billing cycle without forcing them to work through every successful transaction to find the exceptions. Failed collections, mandate issues and transactions requiring intervention are surfaced immediately, while reconciliation and reporting happen automatically in the background.

- **Billing cycle insights**
  See the outcome of every billing cycle at a glance, with failed transactions clearly prioritised so your team knows exactly where to take action.
- **Automated reconciliation**
  Recurv automatically matches collections and payment outcomes, reducing manual back-office work and removing the need for spreadsheets and VLOOKUPs.
- **Reports and integrations**
  Export collection data for your accounting or CRM system, or connect through our API for real-time data synchronisation.
- **Mandate monitoring**
  Track mandate statuses and identify issues before collections are submitted, helping you avoid unnecessary rejections and banking penalty fees.
